# RECIPEPLAN

your recipe finder and meal planner

Team 3
Web Programming

https://kahlen2008.github.io/webprogproject/

# ONE PLACE FOR THE WHOLE MEAL JOURNEY !

RecipePlan seamlessly connects recipe discovery, personal preferences, weekly planning, and shopping.

## 01 Discover

Search recipes by name, category, or ingredient. Open a recipe for ingredients and cooking instructions.

## 02 Personalise

Save diet and allergy preferences, and flag recipes that may conflict with them.

## 03 Plan & Shop

Build a weekly meal plan and generate one combined shopping list.

# WHAT PROBLEMS DOES IT SOLVE?

Recipes, plans and shopping lists live in separate places, and checking diets or allergies by hand is slow and risky.
RecipePlan fixes that!

# WHO DOES IT HELP?

busy students

busy workers

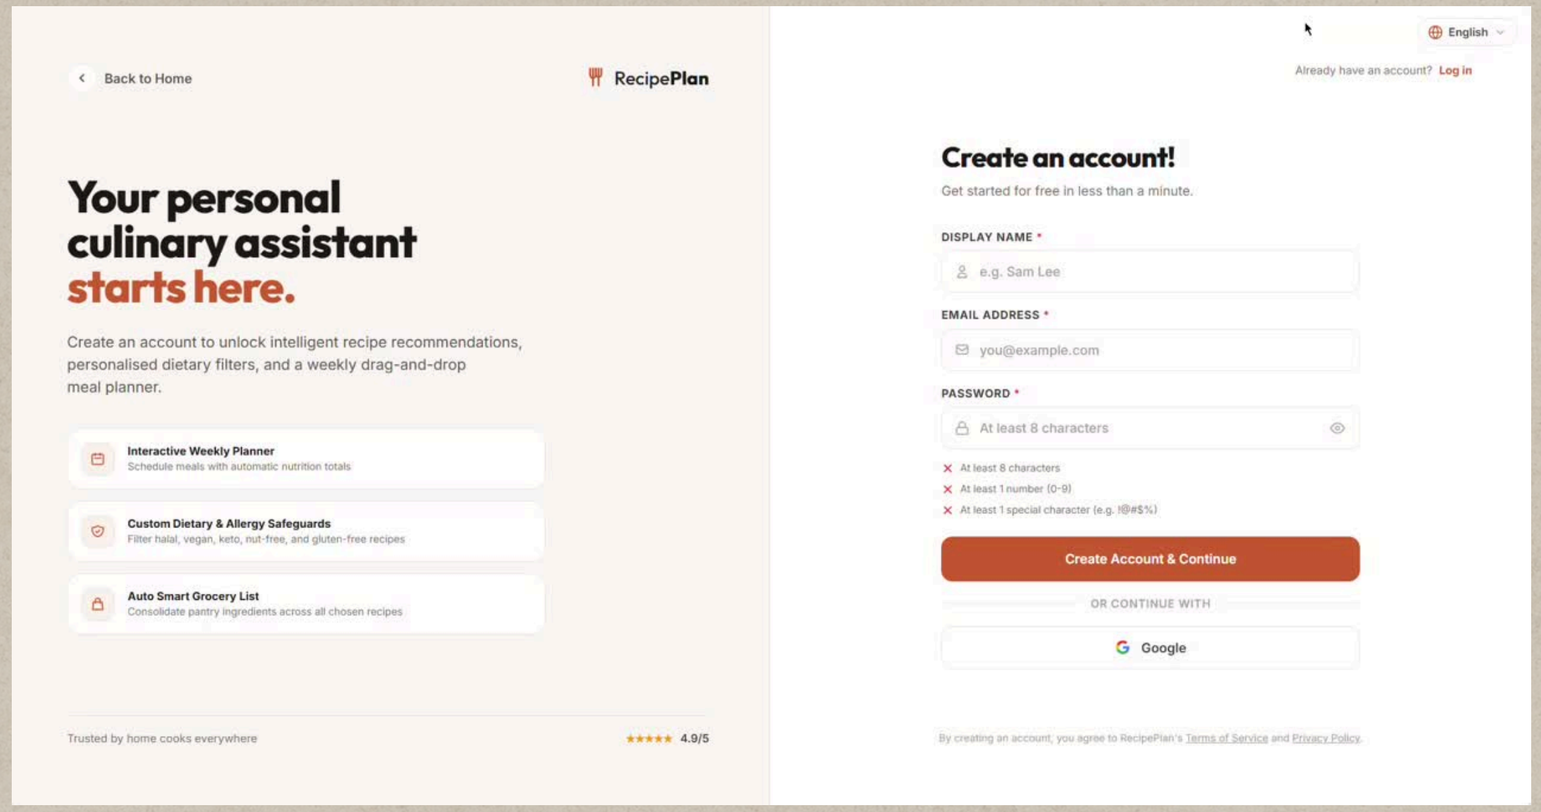
households with dietary needs

# FEATURES

## Accounts & Onboarding

1. sign up and log in with email or Google
2. password rules: 8+ characters, a number and a special character
3. two-step setup: pick your diet, then your allergies

MVP



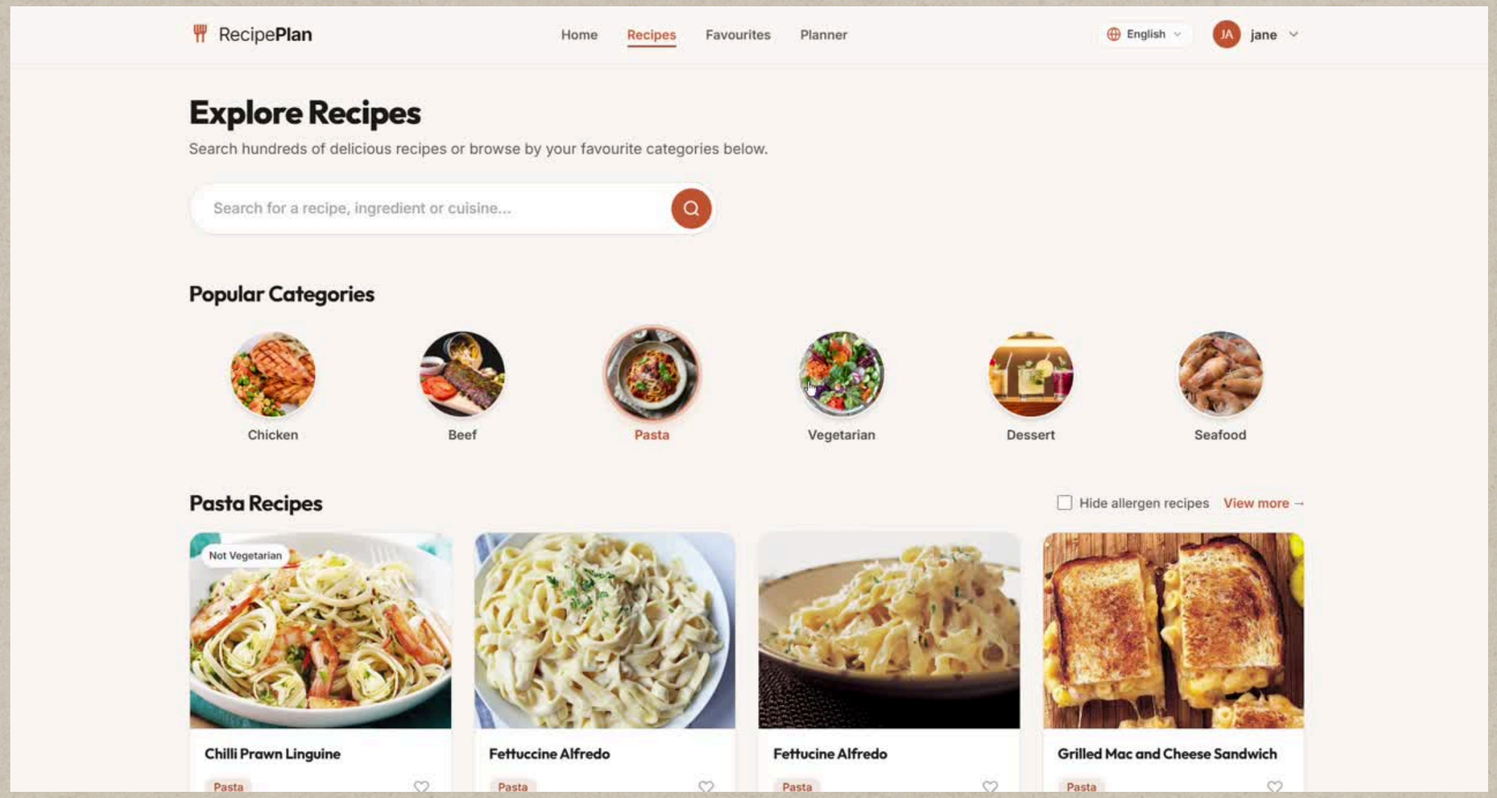
sign up + onboarding process

# FEATURES

MVP

Recipe Search & Discovery

1. search thousands of recipes from TheMealDB
2. filter by category and cuisine
3. recipe page with ingredients and instructions



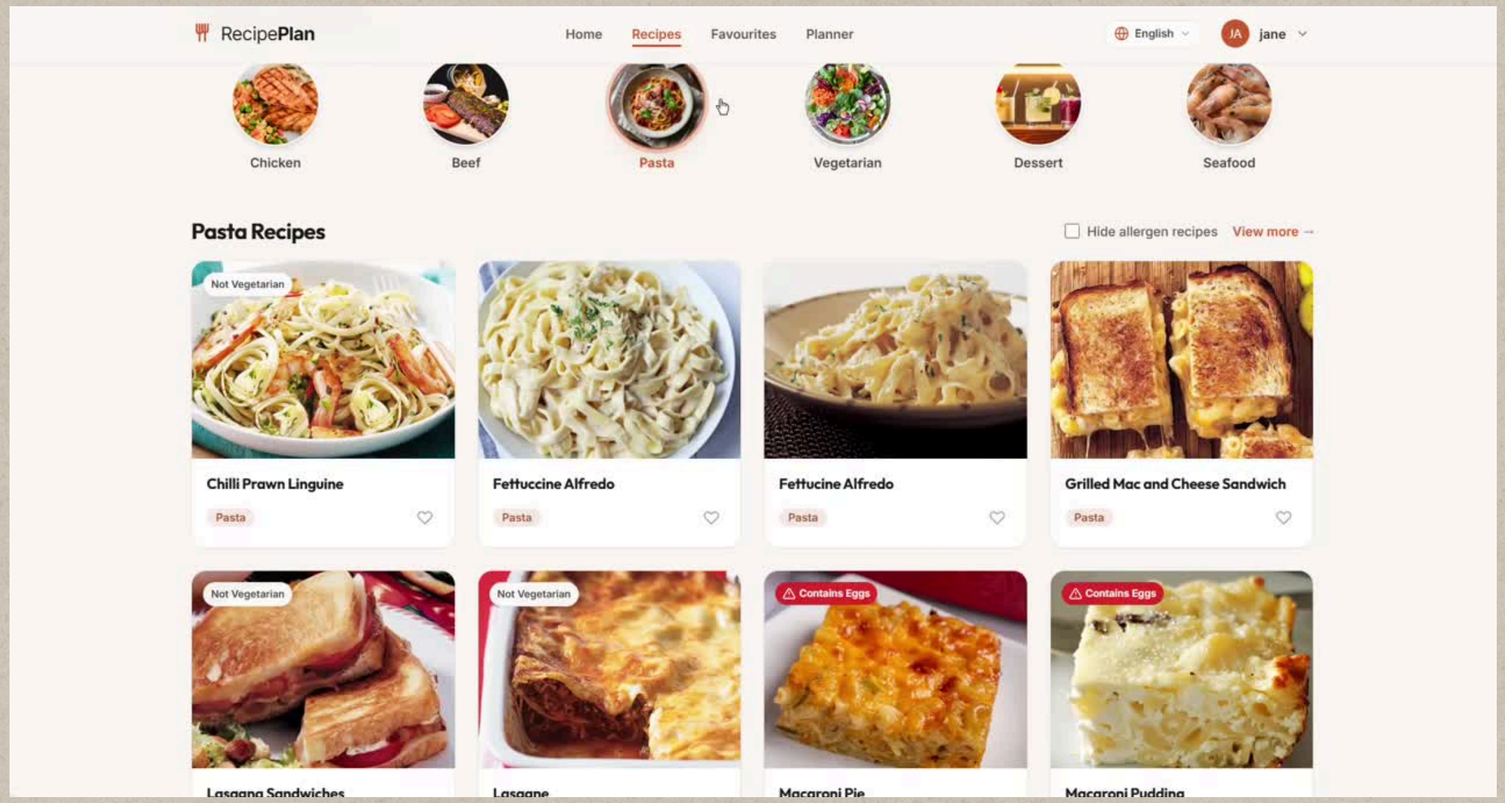
searching for a recipe via the category chips and the search bar

# FEATURES

Diet & Allergy Warnings

1. warning badges on recipe cards & pages when a recipe clashes with your profile
2. option to hide flagged recipes
3. confirm before adding a flagged recipe to the planner

MVP



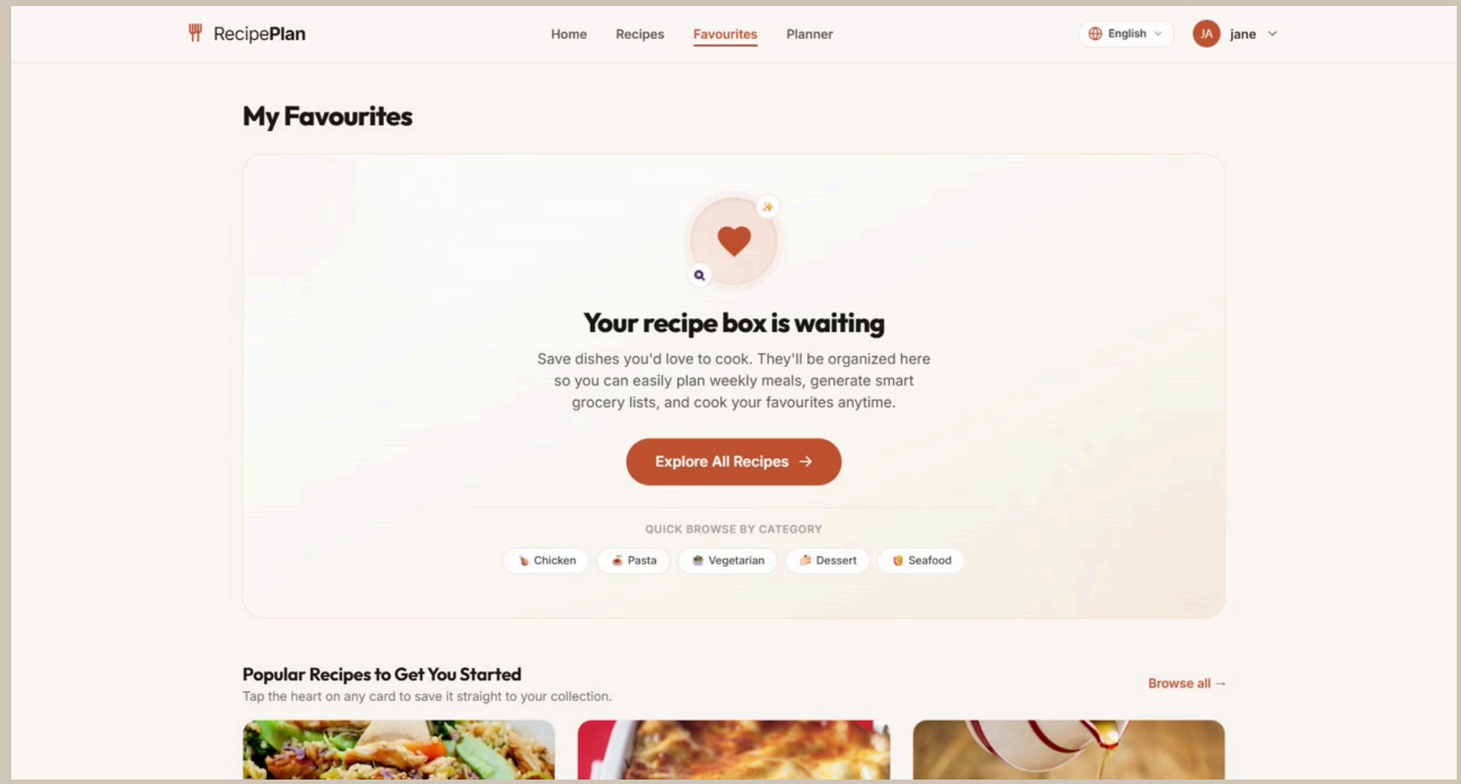
example of warning badges

# FEATURES

MVP

## Favourites

1. save recipes with one tap of the heart
2. favourites page syncs across devices once you're logged in



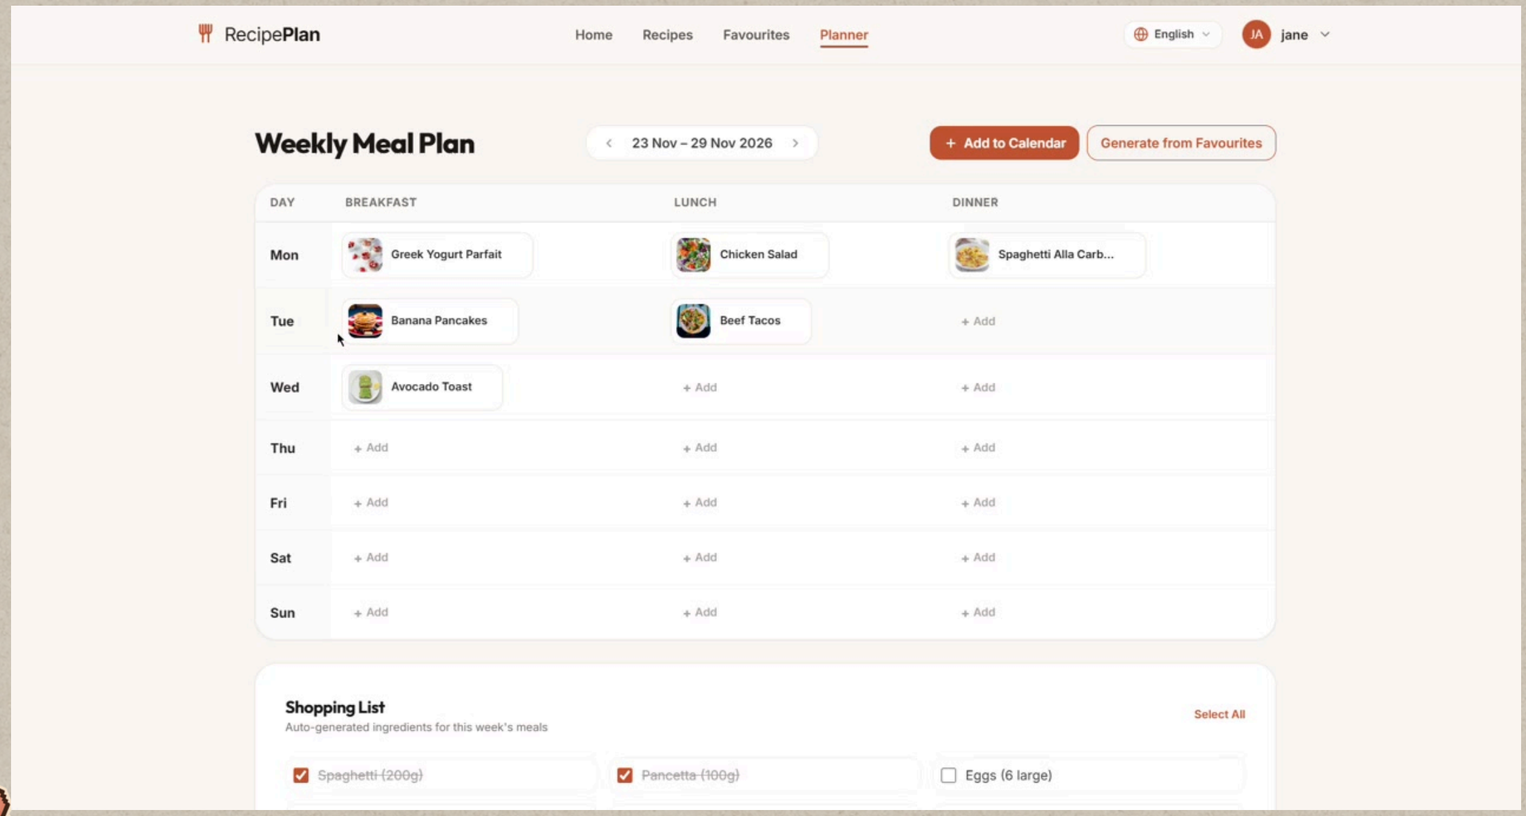
save recipes to favourites using Firebase Firestore, synced across devices

# FEATURES

Weekly Meal Planner

1. plan breakfast, lunch and dinner for all seven days
2. select & pick recipes from a slide-over drawer
3. “generate from favourites” fills the week for you

MVP



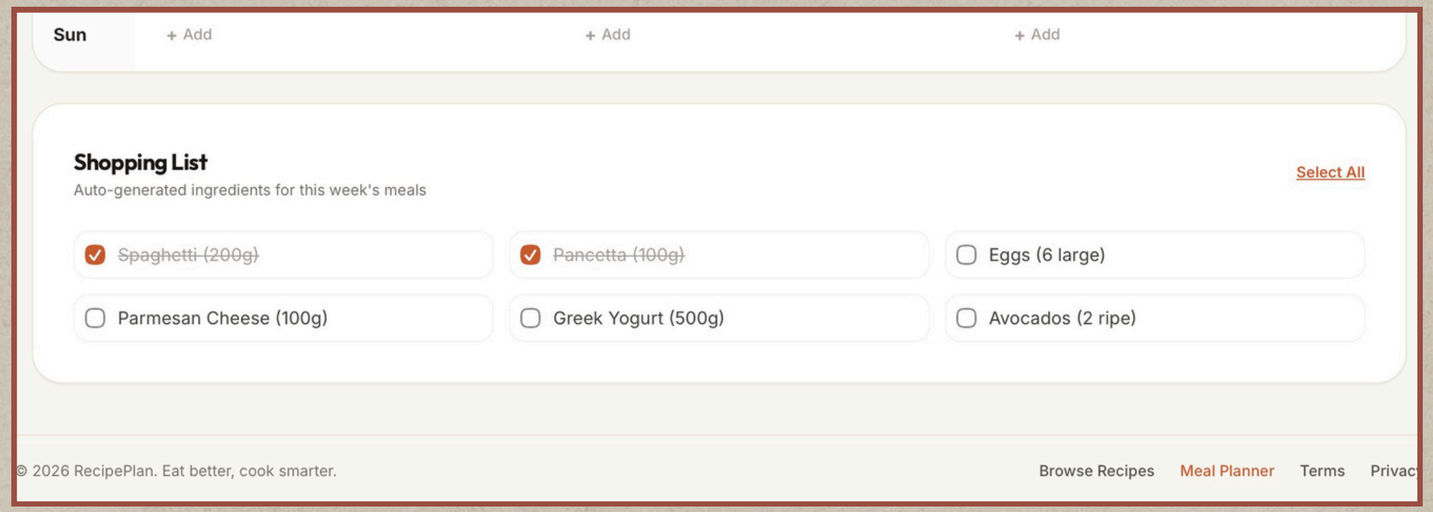
add recipes to a selected day and meal in the weekly planner using Firebase Firestore, and populate the calendar using “generate from favourites”

# FEATURES

MVP

## Shopping List

1. one combined list from the whole week’s meals
2. identical cooking ingredients are merged
3. check completed items off your list



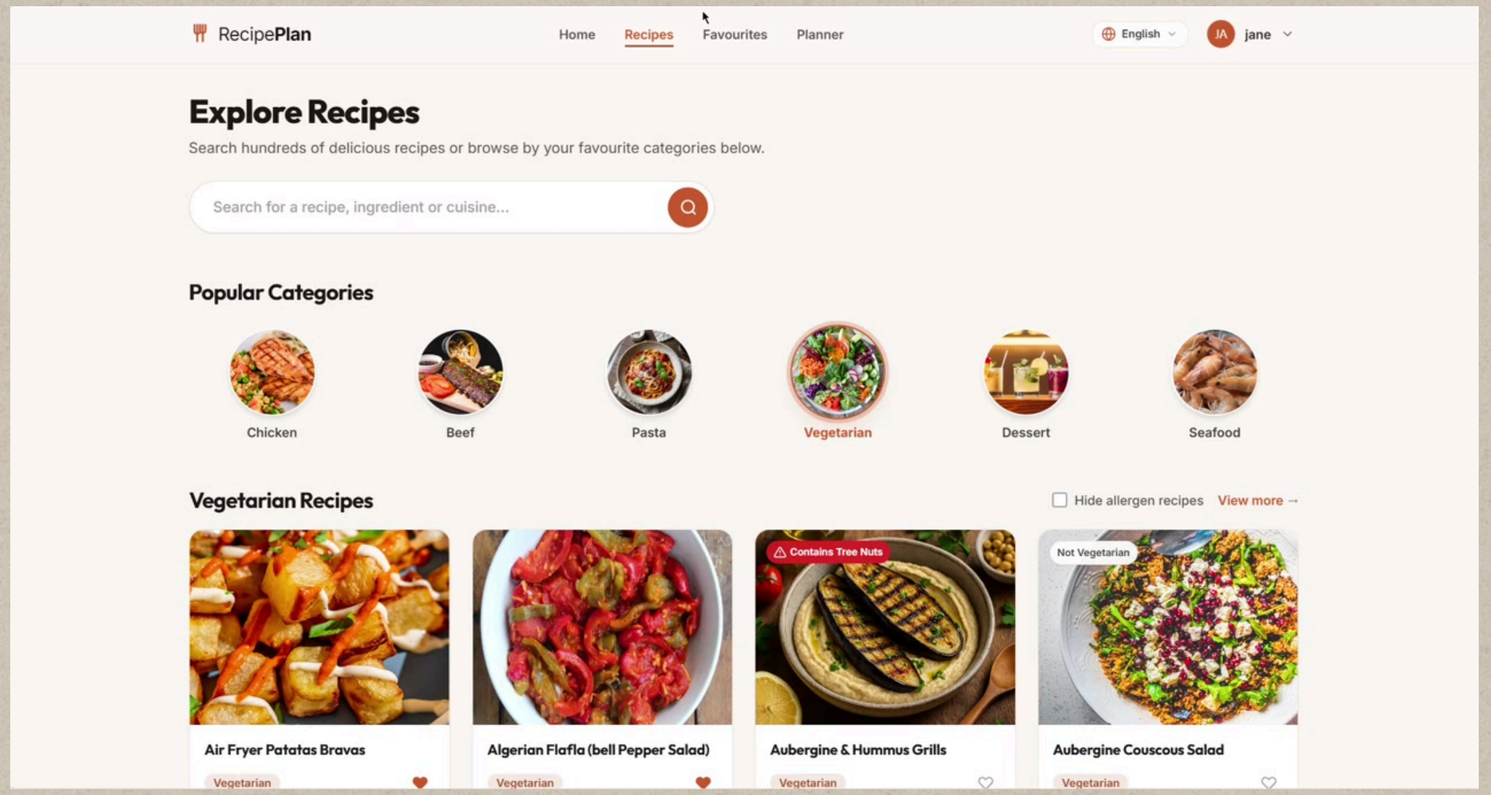
generated shopping list from the weekly planner’s meals

# FEATURES

Multi-Language Support

1. switch between 130+ languages from the navbar
2. search in your own language, and it's translated to English for the recipe database

MVP



searching for recipes in Nepali

# TECHNOLOGY STACK

**Structure**

## HTML + Javascript

Plain ES modules. No frame work, no build step.

**Styling**

## Tailwind CSS

v3 from the CDN, a custom brand palette & shared CSS files.

**Styling**

## Inter + Outfit

Google Fonts for body text and headings.

**Structure**

## Firebase Authentication

Email/password and Google sign-in, with a password policy.

**Recipe**

## MealDB API

Free recipe API, with no key needed.

**Languages**

## Google Translate Engine

130+ languages through i18n.js, and non-English searches translated to English.

**Structure**

## Cloudbase Firestore

Preferences, favourites, ratings, meal plans and shopping lists, with security rules.

**Hosting**

## Github Pages

Deployed from the public/ folder by a GitHub Actions workflow.

**team work**

## Git + Github

main for the stable version, dev for daily work.
